

Sollega™

The Simple Solar Racking Solution™

FastRack 510-6dg™ Ground Mount Installed at Valew Welding

Key Project Facts:

Location & Year

Adelanto, CA 2022

System Size

645 kW-DC/434 kW-AC

Mounting System

(909) FastRack510-6dg at 10° tilt

Modules

(804) Znshine ZXM7-SHLD144 540W

Sollega supplied the FastRack 510-6dg racking solution for the ground mount installation of 804 540W modules on the property of Valew Welding located in Adelanto, CA. The array installation was swift and finished ahead of schedule due to the ease of working with the Sollega racking system.

Ground preparation included grading, installation of weed barrier and ½" drain rock. The FastRack 510-6dg can be installed on asphalt, cement, road base or any low pitch (<7dg) surface. The racking is made of BASF Ultramid™ polymer which will not rust, corrode, or leach any metals.

Sollega's FastRack 510-6dg ground mount solutions feature no-assembly-required racking for quick staging, shipping, and installation. With a 72-80% GCR, minimal ground prep, and reduced geotechnical engineering, it lowers costs and environmental impact. Built for extreme conditions, its non-corrosive, non-conductive polymer ensures durability on brownfields, landfills, gravel, and low-pitch asphalt (<math><7^\circ</math>). Offering

“The FastRack worked out very nice and we killed it in the man hours of the install.” -Installation lead
